Lab 10 - Grips, Hide and Isolate

Course: AutoCAD Masterclass (C391) | Topic 04: Organizing Objects

Objective: LO3/LO4 - edit and manage drawing objects directly

Goal

Use multi-functional grips on EX-7, then practise isolate, hide, select-similar and end-isolate in the denser new-office-design.dwg without losing or deleting objects.

You'll produce

An edited EX-7 layout plus a saved office-plan view in which the targeted object class was isolated, edited and fully restored.

Commands / tools: Multi-functional grips, grip modes (Enter to cycle), Isolate/Hide Objects, Select Similar

Files in this lab

- ex7.dwg - AutoCAD drawing file
- ex7-drawing-sheet.pdf - drawing sheet / reference (PDF)
- ex7.png - reference image
- new-office-design.dwg - AutoCAD drawing file

Step-by-step

1. Open ex7.dwg, click an object and hover its grips to see the grip menu
2. Stretch an endpoint grip to lengthen an edge; use the midpoint grip to move the object

```
click grip → drag / type distance
```

3. Cycle grip modes with Enter: Stretch → Move → Rotate → Scale → Mirror

```
select grip → Enter to cycle
```

4. Copy a feature by grip-moving with the Copy option (or Ctrl held)

```
grip → Move → C (Copy)
```

5. Open new-office-design.dwg, select one furniture object and use Select Similar

```
OPEN new-office-design.dwg → select → right-click → Select Similar
```

6. Isolate the selection, make one grip edit, hide a second class, then restore everything

```
ISOLATEOBJECTS | HIDEOBJECTS | UNISOLATEOBJECTS
```

Check your work

You can stretch, move, rotate and copy with grips alone; after UNISOLATEOBJECTS, the office drawing's object count and layer visibility match the starting state except for your saved edit.
